

Agentic trading workflow

One account (Agentic ••••2907) · one contract · options first · fail closed · white printable diagram · 2026-08-30

Any reject: journal the reason and stop. Pipeline code never places. Live place is F (this chat) or H (Automation) only.

Two authorities, one account, stop first

Do not run two place-capable Automations. Disable H to stop unsupervised buys.

F · This chat

- May scan on request, including a Sunday test
- Needs an explicit confirm of a *specific* order
- Playbook RELEASED is not a blanket authorize-all
- Off switch: do not confirm

H · Automation

- Enabled as Agentic AI Bot
- Clock check before any Robinhood call
- No chat reply. Standing prompt is the permission
- Off switch: Disable the Automation, or delete permissions file

After a fill

- Place broker STOP only (−20% of fill premium)
- Do not rest a live take-profit (no OCO in MCP)
- Watch +40% on a later RTH run
- If already in a position or working order: no new entry

Never

- Crypto, shorts, credit spreads, multi-leg
- Invented Greeks or weekend quotes as live marks
- Account ending 5638, or any non-Agentic account
- More than one open position

Write down

- `signals/*` — last cycle JSON
- `journal/YYYY-MM-DD.md` — skips and tickets
- Mask accounts as `****2907`
- H first Sunday fire: skipped, no RH calls

Read the arrows left to right, then down. Clock → universe → bias → structure → honest quote → cash risk → one authority → review then place → stop first. If any box on the right fires, the cycle ends with no order.
