

Phase 0 — Agentic Trading Plan

Account: Robinhood Agentic ••••2907 only · **Target funding:** \$1,500 · **Status:** Spec locked (docs only; no live trading code yet)

Confirms: This Cursor chat only · **Control:** Cursor Automation toggle · **Journal:** Markdown + JSONL

Options priority

1 contract max

1 open position

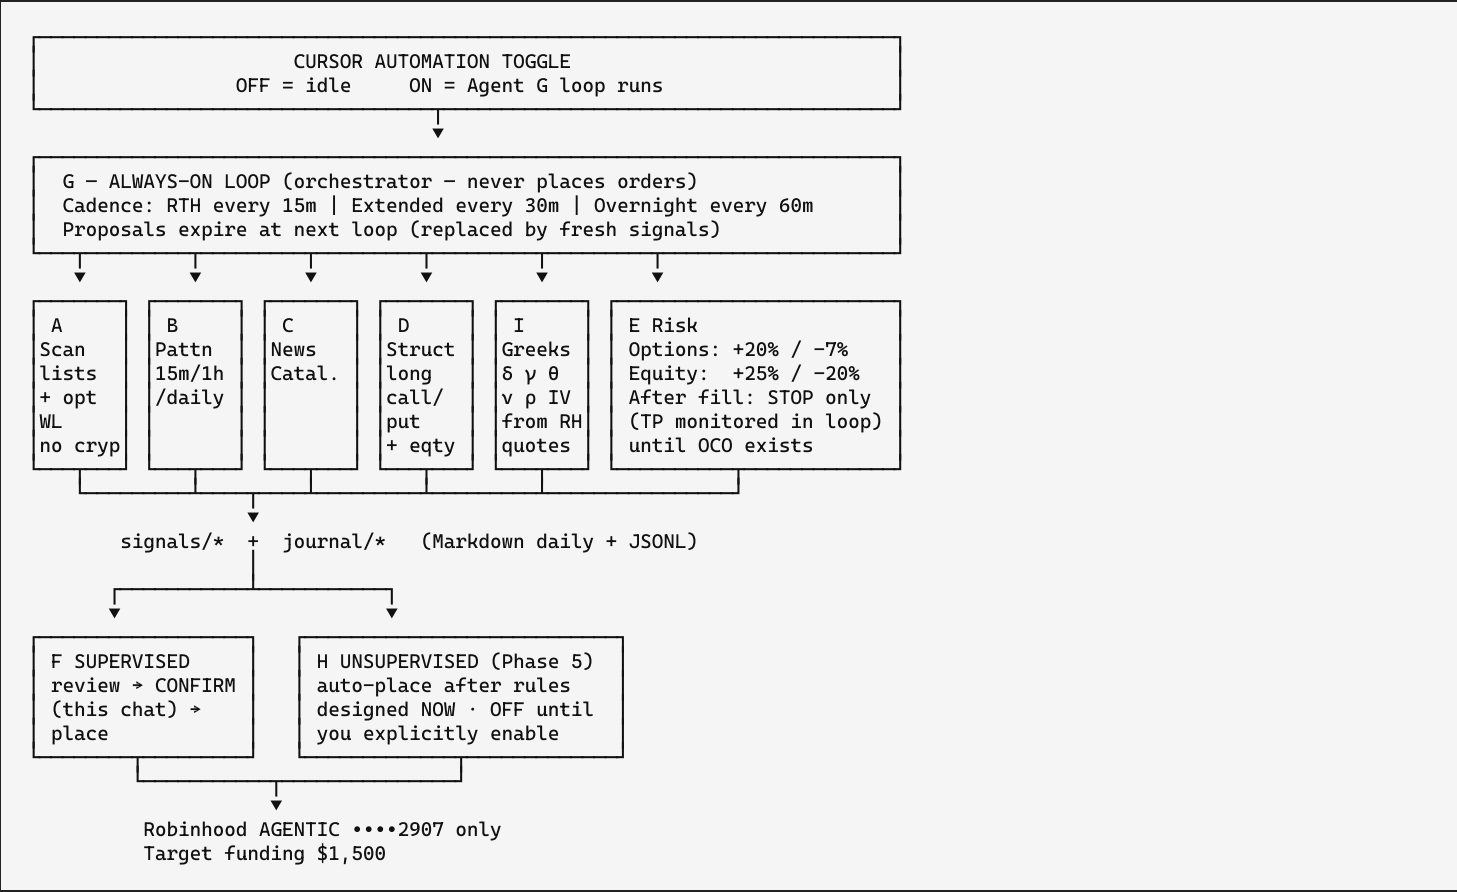

No crypto

Index options OK

Stop-first (until OCO)

Human confirm every live order

1. System architecture

2. Trading rules (master card)

Account	Agentic •••2907 only. Target ~\$1,500. Max 1 open position . Options: 1 contract max . Equity (when used): size up to full buying power for that single position.
Universe	All Robinhood watchlists (current + future), including Options Watchlist . No crypto . Deduplicate each run. Index underlyings/options allowed.
Priority	Options first → equity fallback if no liquid option candidate.
Patterns	Head & shoulders, inverse H&S; double top, triple top; double bottom, triple bottom; ascending / descending / symmetrical triangles. Timeframes: 15m / 1h / daily .
Options structure	Buy call or buy put only (no shorts / no credit spreads). Expiry ≤ 7 DTE. Strike: ATM first, else 1 OTM. Prefer delta ~0.40–0.50 via RH-returned Greeks only (no invented numbers). Playbook stays DRAFT until you approve release. No new options entries overnight .
Greeks (Agent I)	Read delta, gamma, theta, vega, rho, IV from get_option_quotes. Use for strike filter and journal. Never invent Greeks.
Liquidity	Underlying volume gate (v1 target $\geq \sim 2\text{M ADV}$ where applicable). Option spread $\leq 5\text{--}10\%$ of mid or $\leq \$0.10$ absolute on cheap contracts. Reject missing / one-sided quotes.
Options exits	Take profit +20% of cash risked (premium). Stop loss −7% of cash risked. After fill: place broker STOP only . Monitor TP in loop until OCO exists.
Equity exits	Take profit +25% of total trade cost. Stop loss −20% of total trade cost. Prefer broker stop; same stop-first policy until OCO.
Sessions / loop	RTH + extended + overnight monitoring. Cadence: RTH 15m / extended 30m / overnight 60m . Unconfirmed proposals valid until next loop (then replaced).
Execution	Agent F: human confirm in this Cursor chat for every live order. Agent H: unsupervised path designed OFF until you enable.
Ops / journal	Cursor Automation toggle ON/OFF. Write trade journal + signals to this GitHub repo (Markdown + JSONL).

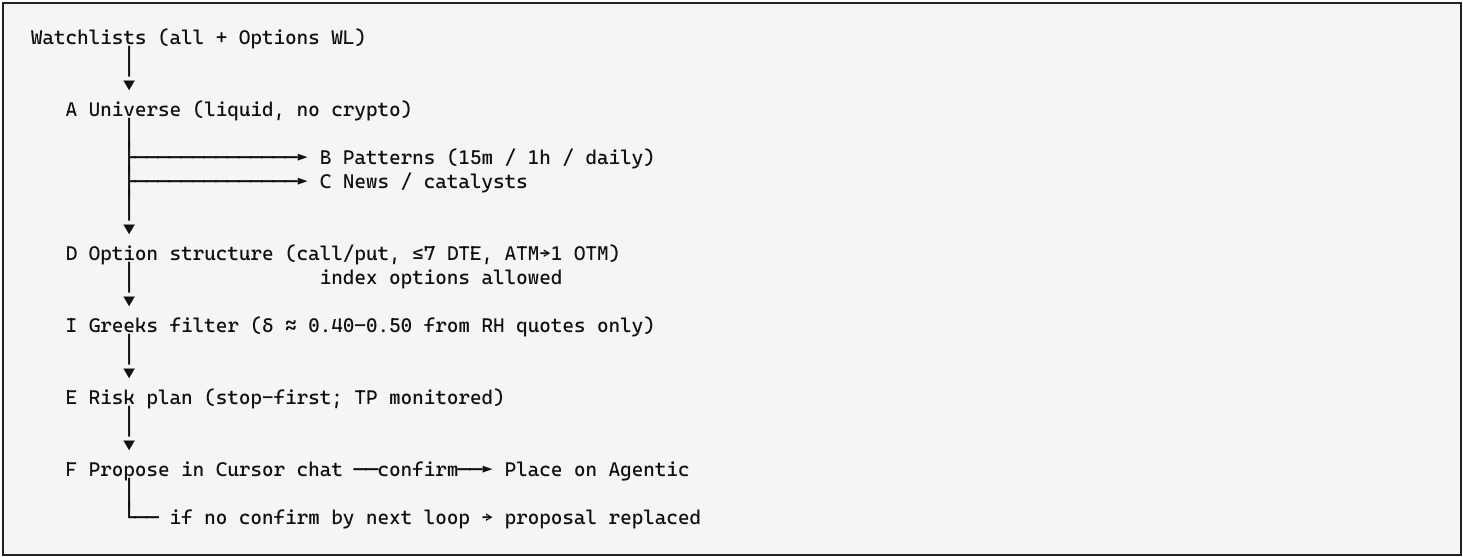

3. Exit rules at a glance

Options (priority) • Max size: 1 contract • TP: +20% of premium cash • SL: −7% of premium cash • Broker: stop order first • TP monitored until OCO available • No new entries overnight	Equity (fallback) • Max: 1 open position • Size: up to full buying power • TP: +25% of trade cost • SL: −20% of trade cost • Broker: stop order first • TP monitored until OCO available
--	--

4. Agent map

Agent	Role	Outputs
A Scanner	All RH lists + Options Watchlist → liquidity filter (no crypto)	signals/universe
B Patterns	Indicators + chart patterns on 15m / 1h / daily	signals/technicals
C News	News / earnings catalysts	signals/news
D Structure	Long call/put ≤7 DTE (incl. index); equity fallback	signals/option_candidates
I Greeks	RH quote Greeks recognition; delta band filter	signals/greeks
E Risk	Options +20%/−7%; equity +25%/−20%; stop-first plan	signals/risk_plan
F Supervised exec	review → your confirm → place	journal/orders
G Loop	Orchestrate while Automation ON; refresh proposals each loop	journal/loop_runs
H Unsupervised	Auto-place after rules (Phase 5; OFF until enabled)	journal/orders (tagged)

5. Signal flow (simple)

6. Build phases

Phase	Deliverable	Gate
0	Spec lock + this printable plan	Your go / no-go
1	Playbooks (chart + options DRAFT) + Greeks agent spec	Options playbook unreleased until you approve
2	Signal pipeline A–E + I (read-only)	You review signal quality
3	Supervised F live	Funded ≈ \$1,500; dry review first
4	Loop G behind Automation toggle	Still confirms via F; proposals refresh each loop
5	Unsupervised H	Docs now; enable only when you say

7. Hard gates before live orders

- Agentic funded (target \$1,500; currently \$0 at last check)
- Options day-trading playbook **approved by you**
- Greeks read from RH quotes only (no invented numbers)
- Agent F confirm flow dry-tested (review without place)

Still open (not locked)

- **PDT:** Accept day-trade / pattern-day-trader risk on ~\$1,500, or reduce day-trade frequency?
- **Options –7% stop vs 5–10% spread:** Keep –7%, widen stop, or require stop distance > spread?
